INDEX

ASANOV G.S. and STAVRINOS P.C.: Finslerian deviations of geodesics over tangent bundle 63–69

AZCÁRRAGA J.A. DE, LUKIERSKI J. and NIEDERLE J.: Contractions yielding new supersymmetric extensions of the Poincaré algebra 33–40

BAUMANN K.: On ray representations of the inhomogeneous Lorentz group in 1 + 1-dimensions 181–184

BLAZQUEZ C. and LLOSA J.: Classical spin particles: a kinematical approach 131–148

BOYA L.J.: The geometry of compact Lie groups 149–162

BURNAT M. and GRUNDLAND A.M.: Canonical solutions of the autonomous partial differential systems 71–80

CARIÑENA J.F. and RAÑADA M.F.: Hamiltonian formalism and time transformations in the extended phase space $T^*(Q \times \boldsymbol{R})$ 89–106

D'APRILE M. and MARINO V.: A geometric method to determine PDE conservation laws 169–175

ENGLISH H. and ŚEBA P.: Cooper pairs with point interaction 9–13

GESZTESY F. and SCHWEIGER W.: Rational KP and mKP-solutions in Wronskian form 205–222

GIELERAK R.: Vacuum energy in the $\mathcal{T}(\varphi)_2$ Euclidean field theory 177–179

GLAZKOV D.YU.: Differential geometric connection of finite order on composite manifold, infinitesimal polygonal loops and generalized Fermi–Walker transport 107–118

GLAZKOV D.YU.: Differential geometric of finite order on composite manifold, infinitesimal polygons and geometric interpretation of Bianchi identity 249–257

GOULD M.D.: Classification of infinite dimensional irreducible modules for type I Lie superalgebras 361–378

GRUNDLAND A.M. *see* BURNAT M.

HAIDEGGER W.: Basic facts about homoclinic and heteroclinic orbits and their importance in the theory of analytical chaos 53–62

HAIDEGGER W.: Melnikov's vector — a measure of chaos 223–231

KADIANAKIS N.: Affine connections and frames of reference in classical mechanics 21–32

KAWAGUCHI T. *see* MIRON R.

KTORIDES C.N. and PAPALOUCAS L.C.: A geometric realization of Van Hove's quantization prescription 1–8

KUBYSHIN YU.A., RICHTER O. and RUDOLPH G.: On teh equations of spontaneous compactification for Gauss–Bonnet extended Einstein–Cartan theory 353–359

LLOSA J. *see* BLAZQUEZ C.

LUKIERSKI J. *see* AZCÁRRAGA J.A. DE and NIEDERLE J.

MAĆKOWIAK J.: Fermi gas with equivalent–neighbour Heisenberg interaction 239–247

MĄCZYŃSKI M.J.: A simple derivation of Hückel' s molecular orbitals in the framework of quantum logic 81–88

MAASSEN H. *see* ROBINSON P.

MARINO V. *see* D'APRILE M.

MATSUMOTO M.: Projectively flat finsler spaces with (α, β)-metric 15–20

MIRON R. and KAWAGUCHI T.: Generalized Lagrange metric derived from a Finsler function 41–52

NIEDERLE J. *see* AZCÁRRAGA J.A. DE and LUKIERSKI J.

PAPALOUCAS L. *see* KTORIDES C.N.

PRÁSTARO A.: Quantum geometry of PDE's 273–352

RAÑADA M.F. *see* CARIÑENA J.F.

RICHTER O. *see* KUBYSHIN YU.A. and RUDOLPH G.

ROBINSON P. and MAASSEN H.: Quantum stochastic calculus and the dynamical Stark effect 185–203
RUDOLPH G. *see* KUBYSHIN YU.A. and RICHTER O.
SALAMON P. *see* TANNOR D.
SCHWEIGER W. *see* GESZTESY F.
ŚEBA P. *see* ENGLISCH H.
STAVRINOS P.C. *see* ASANOV G.S.
TANNOR D. and SALAMON P.: A novel Euler–Lagrange equation arising in the optimization of photochemical branching ratios 233–238
TARAKANOV A.N.: On the isometric representations for multidimensional pseudoconic spaces 163–168
WEHRL A.: The many facets of entropy 119–129
WORONOWICZ S.L.: New quantum deformation of SL(2, C) Hopf algebra level 259–269
